

## The Peak Oil Scam

*Petroleum is not a so-called “fossil” fuel. It is the blood of the earth. The fossil fuel model of petroleum lends itself to authoritarian ideologies or corporate cartel power. Always screaming about “limited” and “diminishing” supply serves as an important lever of price control and inflation.*

By now you must have heard the term “peak oil.” It’s a current and excellent example of how we are conditioned by mainstream news outlets. It’s not that the electronic and print media outlets have their own agenda, rather, these outlets are merely the pipeline (excuse the pun) through which the global elites pump their propaganda.

I have always felt, since the last time we got scammed with the 1973 oil shortage, that it was a good idea to develop alternative sources of energy. They’re out there: solar, wind, hydrogen, maybe even zero-point. They’re cleaner, more environmentally friendly, probably cheaper, too.

Then what happened in the wake of the Great Oil Crisis?

Nothing.

After the *crisis* was forgotten and people became accustomed to paying more, the vehicles—which had been downsized for efficiency’s sake—slowly grew in size and became far less efficient.

No more talk, either, about heating and cooling homes with alternative methods.

Now some thirty-plus years removed from that time, it’s gotten to the point today where the vehicles are gargantuan (some recreation vehicles could be mistaken for apartment buildings) and their appetite for fuel ever-more voracious.

And—guess what?—as I knew would happen one day (which is why my vehicles have always been 4-cylinder compacts), here comes another shortage scam.

This one, however, is going to be the all-time all-timer. The globalists have promised us that. And the globalists always keep their promise.

Probably without your realizing it—and many of you may still not realize it—about a year ago the “peak oil” issue began working its way into all media venues. Beyond that, there are now myriad books and websites devoted to the dreaded end of the Age of Oil.

The appearance of this unified movement means nothing. There is never a shortage of shills—co-opted scientists and authors and talking heads—who are more than willing to undertake the task of raising fear among the masses.

Some of these harbingers of doom, no doubt, really believe the information is accurate, but most of them are less concerned with the truth than they are with the advancement of another agenda, one which, for now, remains somewhat obscured by the smoke-and-mirrors peak-oil front.

I’ve always thought it strange that people attribute unimpeachable integrity to scientists, as if they are morally incapable of fudging figures, manipulating data or flat-out lying.

Why? We trust them because they have PhDs? So what? Intelligence never was an indicator of humanity. After all, it was PhDs that created nuclear weaponry.

At any rate, both sides of the peak-oil issue can support their arguments with any number of experts and reams of data.

So how, then, can one be certain that the End of Oil is a scam?

Well, first, understand that if the oil-oligarch branch of the globalists was telling the truth about the imminent end of black gold, it would have already created a monopoly controlling the next fuel source.

That may, in fact, happen. But right now, while the bought-out banshees wail on in the media about the end of oil, automotive manufacturers are still building them big and thirsty.

If the oil threat were real, don't you think the manufacturers would've gotten the message loud and clear and begun to retool? But they haven't. Can you figure out why?

Beyond the whole scam about oil depletion, a still nastier outcome of the fear campaign is the contention that population reduction is the only solution to the problem.

Leaning heavily on Malthus' notion of carrying capacity, then reinforcing this 18<sup>th</sup>-century postulate with the bleak depiction of the world to come, the globalists are massaging us all to accept the inevitability of a forced reduction of the Earth's population.

Malthus stated that world population would eventually exceed the planet's ability to provide the necessities of food, water and energy for its inhabitants. This, basically, is the concept of carrying capacity.

When Malthus made this prognostication, could he have foreseen the future capability of a technological world to meet the demands of an expanding population?

Nah, probably not.

Yet this antiquated, erroneous assumption is used as the factual basis for the globalists' program to condition the masses to believe that they just might have to sip the hemlock to preserve our planet, our Mother Earth, Gaia, or any of the sundry pagan names occultists have affixed to the orb upon which we live.

If the peak oil issue wasn't so inextricably tied to extermination as a means of survival (figure that paradox out), then it might be considered a real possibility. But when any solution—as in *ultimate* solution—calls for the systematic elimination of the old, infirm, unfit, and less desirable, then you are dealing with a movement and an entity that is the darkest ever to stalk this planet.

That's why the peak oil issue is garbage. It offers no humane solution, claiming entropy (*entropy*, simply defined, means there is no other available energy source that can develop other energy sources for the future) will rule, and that we have no choice but to cull the population.

Right now you, your children, and your grandchildren are being mentally and emotionally prepared to become self-sacrificial to sustain a system—an entwined one-world government and religion—in which the individual means nothing, but the group, the collective, the State means all.

But this coming nightmare can't be true, can it?

After all, you didn't see this anti-peak-oil information on corporate-owned TV, or hear it on corporate-owned radio, or read it in corporate-owned newspapers and magazines.

And, well, of course, if these bastions of truth didn't shine any light on the apocalyptic developments discussed here, then, yeah, they must be nothing other than the ramblings of tin-foil hat wearers.

I wish that were the case. I really do. But, tragically, that's not the case, not at all.

Next up is a look at the coming *shortage* of water and food, and how the globalists will pull that off.
